

Seals and stamped parts  
 Cuffs  
 Individual production  
 Water jet cut parts  
 Special parts sealing technology  
 Semi-finished product range

## POPP special articles

### Are you looking for an inexpensive alternative to a molding?

We produce samples, prototypes or small series according to your drawings or specifications. Due to our comprehensive machinery and innovative employees, we are in a position to process a multitude of materials mechanically.

We can give the required shape to elastomers, plastics, foams and sealing and insulating materials, manufacturing them in various production steps.

Here the following production procedures are combined with each other depending on the requirements:

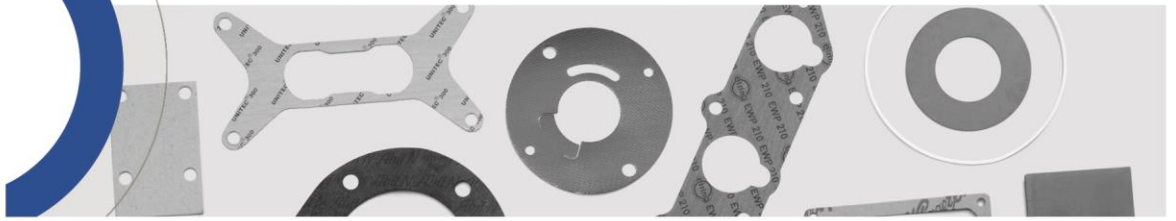

- Water jet technology
- Milling plotter
- Grinding technology
- Gluing technology
- Milling technology (manual production)
