Water-jet cut parts left on the reel for small series and complex parts

[www.spaeh.de/kiss-cut-waterjet](http://www.spaeh.de/kiss-cut-waterjet)

**Water-jet cut parts left on the reel  
("Kiss-Cut" by water jet)**

"Kiss-Cut" includes the supply of single-sided self-adhesive stamped parts that are left on the reel and made from soft sealing compounds, insulating materials, elastomers, foam, cellular rubber materials and even soft plastics.

**Implementation**

The adhesive film to be used as the carrier strip is determined according to your technical requirements. The cut parts are delivered on sheets, with or without cutting grids or inner cutaway.

**Advantages**

- Our water-jet method is particularly suitable for **complex parts and smaller quantities**
- No tool costs
- Reduced handling costs
- Time savings due to automatic removal of the water-jet cut parts from the carrier
- Minimization of waste by means of deformation-proof packaging and transport
- Rationalized work sequences for increased productivity
- Also suitable for open-pore and soft foams

**Service**

- Representative samples are available as well as consultation regarding application-optimized implementation
- We can provide a stamped version as an alternative for larger quantities:
