

### Seals and stamped parts

- Turned and milled parts
- Cast and moulded parts
- Water jet cut parts
- Semi-finished goods
- Special parts

### Our Kiss-Cut Service:

Stamped parts left on the reel for large series

[www.spaeh.de/kiss-cut-punching](http://www.spaeh.de/kiss-cut-punching)

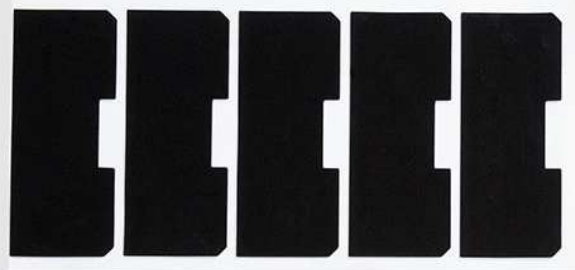

Water-jet cut parts left on the reel for small series and complex parts

[www.spaeh.de/kiss-cut-waterjet](http://www.spaeh.de/kiss-cut-waterjet)

## Stamped parts left on the reel ("Kiss-Cut" in stamping process)

"Kiss-Cut" includes the supply of single-sided self-adhesive stamped parts that are left on the reel and made from soft sealing compounds, insulating materials, elastomers, foam, cellular rubber materials and even soft plastics.

### Implementation

The adhesive film to be used as the carrier strip is determined according to your technical requirements. The stamped parts are delivered on rolls or strips as desired, with or without stamping grids or inner cutaway.

### Advantages

- Our stamping process is especially suitable for **large series**
- Reduced handling costs
- Time savings due to automatic removal of the stamped parts from the carrier
- Minimization of waste by means of deformation-proof packaging and transport
- Rationalized work sequences for increased productivity
- Suitable for hard and soft elastomers and plastics as well as paper materials

### Service

- Representative samples are available as well as consultation regarding application-optimized implementation
- As an alternative for **smaller quantities and more complex parts**, we can provide a cost-effective water-jet cut or plotted version:
