## Screen Printing Seals by SPÄH – the optimal addition for your flat seals

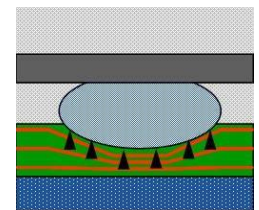

Screen printing seals from SPÄH are statically flat seals with an individual contour imprint out of silicone. The sealing contours, which are produced with a highly developed screen printing procedure, are applied on defined sealing zones.

### Why are screen printing seals interesting?

These types of seals make it possible

- to counteract the deformation of the components
- to route the surface pressure to the place, where it is necessary.

### Field of application

- The main characteristic of the sealing components is the sophisticated screen printing technology with their special possibility of pressing lines.
- The pressing of lines is used there, where a sufficient surface pressure for any reason is not possible, for example at unstable components, bend-weak flanges, very irregularly arranged screws assembly or if a too low twisting moment is given.

### Advantages

- A contact area, which is reduced on a small seal strip (screen printing bead) results in higher specific pressing force and grants a higher security in sealing and therefore more reliability
- An easier construction by the omission of sealing spaces
- Lighter components by lower gasket seating loads of the seal
- Omission of additional sealing resources.

Eine Musterdichtung senden wir Ihnen sehr gerne zu. Unser Vertrieb informiert Sie zudem über die weiteren Vorteile oder berät Sie bei der Umsetzung.
